Customize Switch with modules

Aim:

To customized a cisco switch by adding or removing network modules with cisco packet tracer.

PROCEDURE:

- Open cisco packet tracer
- Add a network switch
- Open a physical view & turn off the switch.
- Add a network module & power on the switch for booting device.
- Connect two pc to the switch Fa0 & Fa1 with their IPv4 address & subnet mask
- After connecting configure each PC's with their IPv4 address & subnet mask.
- Test for connectivity from PC0 → command Prompt → Ping 192.168.10.5 verify o/p.

Result:

Hence, the customized switch with module has been implemented successfully.
