

Aim:
To install configure and use webalizer to analyze web server log files and generate statistical reports.

PROCEDURE:
1. Set up a linux system with a Apache or nginx and install webalizer.
2. Locate the web server access log files.
3. Configure webalizer to analyze log files.
4. Generate and open the statistical report in a browser.
5. Examine visitor counts, page views, hits and HTTP status codes.

RESULT:
Web server logs were analyzed using webalizer and website usage statistics were generated.
