Exp no: 08

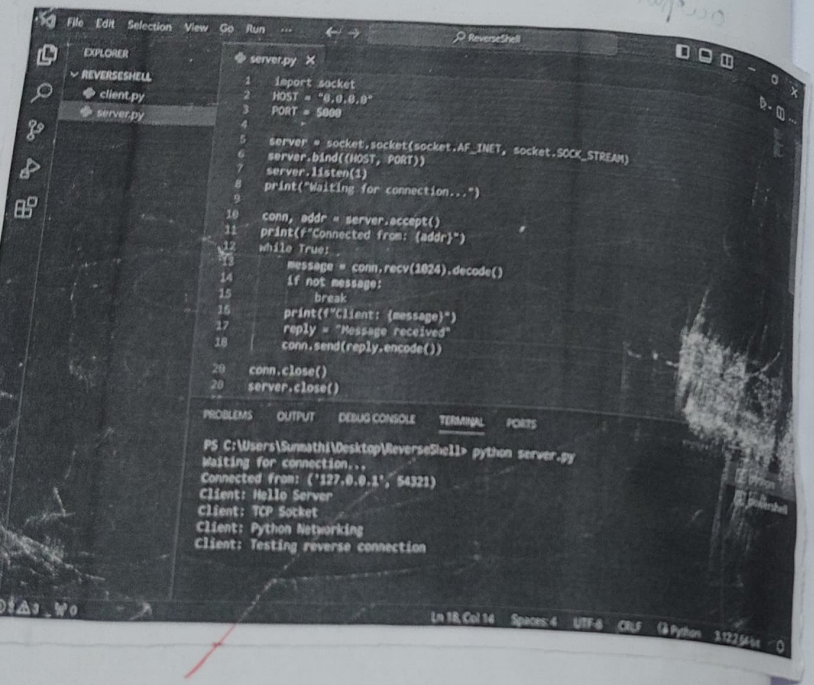

Develop a program to create Reverse shell using TCP socket.

Aim:

To develop a TCP socket-based client-server program that establishes a connection between the client and server enables message communication.

Procedure:

1. Verify the python installation.
2. Create a python file as server.py and client.py.
3. Write the python program is server.py and client.py.
4. Start the TCP server and bind it to the specified IP.
5. Make the client connect to the server using the same IP address and port.
6. Display the recieved response on the client.

Result.

Thus the tcp socket client-server communication program was successfully implemented in Python.
